

Homework #8  
Due Tu. 05/03

A number of these homework problems require you first go through the “Solved Problems” since the description/definition is not in the chapter material.

You are allowed to use Matlab (or similar) to help solve these problems but will be required to know how to do them by hand for the Final Exam. As an example, you may want to find the inverse using the Symbolic Toolbox:

```
syms z;                % create symbolic variable z
A = eye(3);            % create simple system matrix
G = (z*eye(3) -A)^-1    % find inverse
```

Other Matlab functions that may be helpful include `inv.m`, `rank.m`, `eig.m`.

1. (Schaum 7.57)

2. (Schaum 7.58)

You only need to provide one of the canonical forms. Also, draw the block diagram for the form you select.

3. (Schaum 7.60(b))

4. (Schaum 7.62)

5. (Schaum 7.65)

6. (Schaum 7.68)

7. (Schaum 7.71(b))

8. (Schaum 7.73)
